Professional Summary

Results-driven Software Engineer and former Operations Manager with a decade of leadership experience managing cross-functional teams of up to 40 employees. Transitioning into Software and AI Engineering, I bridge the gap between high-scale operational logic, system infrastructure, and technical execution. Expert in scaling systems, driving efficiency, and diagnosing complex architectures under pressure. Deeply committed to building secure full-stack applications and optimizing local AI environments to democratize cutting-edge technology.

Technical Skills

- **Languages:** TypeScript, JavaScript, C#, SQL, HTML5, CSS3
- **Frameworks & Libraries:** React, Next.js, Node.js ASP.NET Core, Express, Entity Framework
- **Cloud & Databases:** Firebase, Firestore, MS SQL Server, Vercel, RESTful APIs
- **AI Infrastructure:** Hardware-Software Virtualization, Local LLM Tuning, AMD ROCm Stack, Resource & VRAM Optimization
- **Methodologies:** Systems Design, Data Structures & Algorithms, Design Patterns, Agile/Scrum, QA/Test-Driven Development (TDD)

Technical Projects

Full-Stack Application Deployment (Summarist) | May 2026

- Architected and launched a responsive full-stack platform utilizing Next.js, React, and Tailwind CSS
- Implemented secure authentication and state management utilizing Firebase and Firestore cloud infrastructure.
- Integrated Stripe API endpoints for real-time payment processing and configured strict, environment-specific security protocols.

AI Workflow Optimization & Local Infrastructure Architecture | Ongoing

- Designed a hybrid online/offline coding assistant infrastructure directly within a local IDE workflow, optimizing local LLMs including Qwen-3.5-9B-DeepSeek-V4-flash (writing code and tests) and Phi-4-mini-reasoning (autocomplete).
- Virtualised and optimized models using the AMD ROCm stack on a high-compute setup (AMD Radeon RX 7900XTX 24GB VRAM, Ryzen 9 5900X, 64GB RAM).
- Managed severe compute and memory constraints inside LM Studio, adjusting contexts and quantization levels to achieve maximum hardware token-throughput

Enterprise Business Logic API (Blogger App) | Full-Stack Project

- Engineered a robust, layered backend API utilizing C# and ASP.NET Core with Entity Framework.
- Designed a relational data schema using Microsoft SQL Server and enforced a strict separation of concerns via the Service Layer pattern
- Implemented custom, role-based authorization rules to simulate secure corporate access controls.

Professional Experience

Skinstric.ai | Remote Software Engineering Intern | June 2026

- Selected for an engineering internship to architect and build a high-performance facial analysis dashboard utilizing Next.js and TypeScript.
- Engineered fluid user interactions and complex visual states by integrating the GSAP animation library into a modern React architecture.
- Collaborated on design system implementation, optimizing frontend asset delivery, and maintaining clean code best practices.

Zeeks Pizza | Seattle, WA

Operations Manager / Technical Project Lead | September 2015 – May 2025

- Led turnaround strategies for a multi-million dollar business unit during the 2020 pandemic economic disruption, growing annualized revenue by 30% through strict operational pivot models.
- Drove consistent year-over-year organic revenue increases of 6% annually for consecutive years at baseline corporate locations.
- Managed the comprehensive rollout and physical deployment of the enterprise Toast POS platform; owned backend menu data structures, QA testing, and configuration of the production customer-navigation trees.
- Recruited, trained, and directed high-volume cross-functional teams of up to 40 individuals while maintaining strict oversight of P&L budgeting, logistics, and resource allocation

Zimmer Biomet | Bellevue, WA

Surgery Coordinator / Inventory Logistics Specialist | October 2013 – March 2015

- Coordinated high-stakes scheduling workflows and quality assurance procedures for complex surgical implants under zero-margin-error deadlines
- Maintained strict adherence to HIPAA compliance and patient data confidentiality protocols within a heavily regulated healthcare environment.
- Governed a complex medical implant and specialized surgical tool inventory system, tracking assets across multiple regional clinical destination sites.

Education & Certifications

Frontend Simplified Institute *Software Engineering Certificate* | Graduated June 2026

- **Core Engineering Concentration:** Intensive data structures, algorithms, advanced systems design, and structural design patterns

South Seattle Community College *Network Administration and Applied Technology*

- **Core Technical Foundations:** Systems administration, foundational networking infrastructure, network hardware routing, and operating system diagnostics
