Professional Summary

Results-driven **Software Engineer** and former Operations Manager with a decade of leadership experience managing cross-disciplinary teams of up to 30 employees. Transitioning into **Software and AI Engineering** to serve as a bridge between high-scale operational logic, system infrastructure, and technical execution. Highly proficient in **Full-Stack Development** (TypeScript, Next.js, C#) and **AI Infrastructure** (LLM Tuning, ROCm). Committed to building secure, scalable applications and democratizing cutting-edge technologies.

Skills & Technologies

- **Languages:** TypeScript, JavaScript, C#, SQL, HTML5, CSS3
- **Frameworks & Libraries:** React, Next.js, Node.js ASP.NET Core, Express, Entity Framework
- **Cloud & Databases:** Firebase, Firestore, MS SQL Server, Vercel, RESTful APIs
- **AI Infrastructure:** Local LLM Tuning, AMD ROCm Stack, VRAM Optimization.
- **Methodologies:** Systems Design, Data Structures & Algorithms, Design Patterns, Agile/Scrum, QA/Test-Driven Development (TDD), Git

Technical Projects

Full-Stack Application Deployment (Summarist)

- Architected a responsive platform utilizing Next.js, React, Redux, and Firebase to support real-time state management for 100% of user interactions.
- Implemented secure authentication and state management utilizing Firebase and Firestore cloud infrastructure.
- Integrated Stripe API endpoints for real-time payment processing and configured strict, environment-specific security protocols.

AI Workflow Optimization & Local Infrastructure Architecture

- Designed a hybrid online/offline coding assistant infrastructure directly within VS Code workflow, optimizing local LLMs
- Virtualised and optimized models using the AMD ROCm stack on a high-compute setup
- Exercised critical thinking by identifying and resolving complex memory bottlenecks in local LLM deployments, effectively reducing inference latency and optimizing token-throughput.

Enterprise Business Logic API (Blogger App) | *CRUD Project*

- Engineered a robust, layered backend API utilizing C# and ASP.NET Core with Entity Framework.

- Designed a relational data schema using Microsoft SQL Server and enforced a strict separation of concerns via the Service Layer pattern
- Implemented custom, role-based authorization rules to simulate secure corporate access controls.

Professional Experience

Skinstric.ai | Remote

Software Engineering Intern | April 2026 – June 2026

- Selected for an engineering internship in an Agile environment to architect and build a high-performance frontend and facial analysis dashboard utilizing Next.js and TypeScript.
- Engineered fluid user interactions and complex visual states by integrating the GSAP animation library into a modern React architecture.
- Actively collaborated with design and product teams to implement a unified design system, ensuring consistent cross-team alignment and accelerating frontend deployment cycles.

Zeeks Pizza | Seattle, WA

General Manager / Technical Project Lead | September 2015 – May 2025

- Demonstrated adaptability by pivoting operational strategies during a global economic crisis, stabilizing business and maintaining team morale under high-pressure conditions. Grew annualized revenue by 30% through strict operational pivot models.
- Drove consistent year-over-year organic revenue increases of 6% annually for consecutive years at baseline corporate locations.
- Led cross-functional stakeholder communication during the enterprise Toast POS rollout, effectively translating complex technical requirements into user-friendly training modules for staff members. Owned backend menu data structures, QA testing, and configuration of the production customer-navigation trees reducing ordering friction.
- Reduced labor spend by 20% by leveraging real-time sales and labor analytics to optimize staffing needs.
- Minimized customer service friction by implementing an agile menu-update workflow, reducing the need for customer substitution calls by 15%.
- Recruited and mentored high-performing teams across 4 distinct locations, fostering a culture of continuous improvement that reduced staff turnover by 10% and decreased labor dollars per hour by 15%.

Zimmer Biomet | Bellevue, WA

Surgery Coordinator / Inventory Logistics Specialist | October 2013 – March 2015

- Governed high-stakes inventory logistics for surgical assets valued at up to \$100,000, ensuring 100% availability of critical implants and instrumentation for time-sensitive procedures.
- Coordinated deliveries and performed quality assurance procedures for complex surgical implants under zero-margin-error deadlines.
- Maintained strict adherence to HIPAA compliance and patient data confidentiality protocols within a heavily regulated healthcare environment.

Education & Certifications

Frontend Simplified Institute *Software Engineering Certificate* | Graduated June 2026

- **Core Engineering Concentration:** Intensive data structures, algorithms, advanced systems design, and structural design patterns

South Seattle Community College *Network Administration and Applied Technology*

- **Core Technical Foundations:** Systems administration, foundational networking infrastructure, network hardware routing, and operating system diagnostics
